- Cost to build green are on the same level as traditionally built homes

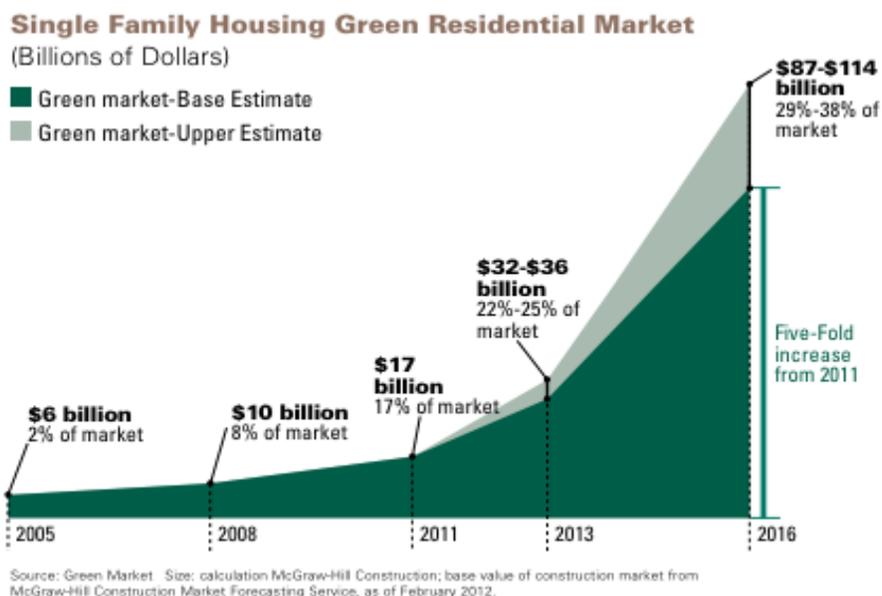

Benefits of Investing in a Green Home

Homes with “green” features sold for \$33,894 or 7.2% more than traditionally built homes in 2015, per a recent study by Redfin.

Certified Green Homes resale value is up to 30% more than traditionally built homes in states like Washington, Oregon, California and Texas per the Earth Advantage Institute, a nonprofit organization in Portland, Oregon.

70% of new home buyers in the next decade will be looking for energy efficient, healthy to live in, Certified Green Homes, per a report from The National Association of Realtors and The National Association of Home Builders.

In 2005 only 2% of new construction was green, in 2016 approximately 38% of new construction was green. The confluence of a stagnant housing market and consumer desire to save money is creating a green home building boom that could be worth up to \$114 billion, per a latest Smart Market Report on Green Homes and Remodeling, NAHB.

Invest in Green construction, the value of your investment will increase each year.
